

Why the Transformer is selected for the experimental PoC

Supporting evidence

Higher Top-1, Macro-F1, weighted-F1, balance and MRR
Paired CIs above zero
CPU p95 0.809 ms; 17 KB checkpoint
Validation-only selection; deterministic replay

Required limitations

91.0% of wins are Persistence
Execution recall 0.7118; privilege escalation 0
Weak labels and 45 sequence patterns
No prospective independent holdout

Claim: strongest aggregate model on this corpus—not general production superiority.
